- Renewable-plant-based formulation, phosphate free, no glycol ether, ozone safe, phthalate free

Available sizes: 32 oz spray bottle, 1 gallon, 5 gallon & 55 gallon drum

Why Is the USDA's BioPreferredSM Program Important?

The USDA's BioPreferredSM Program aims to increase the purchase and use of renewable, environmentally friendly biobased products while providing "green" jobs and new markets for farmers, manufacturers and vendors.

The USDA's BioPreferredSM Program offers three major benefits: Climate Change Impact Reduction, Energy/Environmental Security, and Economic Development.

For more information about the USDA's BioPreferredSM Program, visit www.biopreferred.gov

What is a biobased product?

As defined by FSRIA, "biobased products" are products determined by the U.S.

Secretary of Agriculture to be commercial or industrial goods (other than food or feed) composed in whole or in significant part of biological products, forestry materials, or renewable domestic agricultural materials, including plant, animal, or marine materials.

What is the impact of biobased products on the environment?

It is expected that most biobased products will have a more benign effect on the environment, will be biodegradable, and will have lower disposal costs and cleanup costs than the fossil energy based products they will replace.
